

Please feel very welcome to this message from AHI. So far this year 2009 there have been great achievements acknowledged through the collective efforts with each one in the organization; playing a part to strengthen and model our vision.

In the first development, the AHI Trainers attended a computer class that awarded certificates. It was conducted by Wayland Cassey as Course Coordinator with his wife, Courtney. It was interesting and achievable. It related us to the global world where technology presents great opportunities in reshaping the internal and external business.

So, just as a Trained and Trustworthy Team of talented individuals, more privileges were expressed where by workers wages were increased. So this proved the reflective and effective functioning of a leader/manager in an organization. This was an interesting moment when each was talked to about wage differences. Therefore, all the positive attitudes dealing with growth and excellence those personalities believe in.

In everything we do – Jesus’ way of operating remains the model we follow. So in 2009 developments: AHI staff got the solar panels for light that all the quarter/houses of workers are fully connected with power. That will enable us to read books and make research effectively to maintain the standard of the vocational school. The engineer of solar wiring was Mr. Randy from America, a team leader of a group that visited ACM. It also involved Jimmy, Hakim and Otto. In a related development, water is also extended to the compound of staff quarters; therefore, water is no longer scarce.

Finally, our hospitality family of AHI extends sincere gratitude to our sponsors for the support offered to them. We are very grateful.

Pray with us that the good Lord may bless us and enlarge our territories. [1 Corinthians 4:10]
